#### **SPECIFIC COMMENTS TO AUTHORS**

I think this is a great editorial on "Artificial Intelligence and Cancer", summarizing the history and development of artificial intelligence, the application of AI in cancer, especially the current status of practice in the fields of diagnosis and treatment. There are two suggestions for recommend only 1. The title is "How would artificial intelligence and human cancer live together?", I think a more appropriate title might be "How would artificial intelligence and human work together to fight against cancer?". Because the focus of the editorial discussion in general is how humans use AI to prevent or treat cancer. 2. The readability of the article can be improved, especially the part of "AI IN data analysis"
