SPECIFIC COMMENTS TO AUTHORS

Thanks for recommending me as a reviewer. The objective of this study is to determine the prevalence of constipation and analyze the clinical features and relative factors in a cohort of Chinese patients with Parkinson Disease (PD). This study is well written overall. If the authors complete minor revisions, the quality of the study will be further improved. 1. In the Introduction section, it is necessary to further describe the theoretical background for constipation in PD patients. 2. It is necessary to describe the inclusion criteria and exclusion criteria of the subjects in more detail. 3. Please check the spacing in the significance level indication in Table 4. 4. It is suggested to correct the significance level "0.000" to "<0.001" in all tables (table 4, Table 5).
