COVID19 Infection in a Kidney Transplant Recipient

**Abstract**

**BACKGROUND**

Being a solid organ transplant recipient is considered as a high-risk factor for developing COVID-19 infection-related complications. The optimal treatment for this patient group remains to be unknown. Consequently, the treatment of COVID-19 in kidney transplant recipients should be determined individually, considering patient age and comorbidities, as well as, graft function, time of transplant, and immunosuppressive treatment.

Immunosuppressive treatments may pave the way for severe COVID-19 infection. On
