SPECIFIC COMMENTS TO AUTHORS

In this case report of a kidney transplant patient with suspected Covid-19 infection, the authors describe the increase in serum creatinine related to rising tacrolimus level due to concomitant administration of azithromycin. Tacrolimus level returned back to therapeutic level on discontinuation of azithromycin with subsequent return of serum creatinine to base line value. Increase in tacrolimus level with concomitant use of macrolide antibiotics including azithromycin is well known. The case report lacks novelty.

SPECIFIC COMMENTS TO AUTHORS

It is very well-written case, however, it is not very convincing that the patient was infected with Covid. The CT of the chest may provide a slim suspicion pointing toward Covid. But the way you presented the case and the discussion was very interesting and provided a nice scientific review of not only your case but the pharmacology and drug interaction which in my opinion it is very informative. You need to work little harder on the English language of the paper which requires little cleaning up and some editing.

Dear authors, I think you did good job in revising the paper, overall it is much better now. May be some minor English language polishing which can be done by the editorial office.
