<https://www.sciencedirect.com/science/article/pii/S0167527305011496>

Oct 26, 2006 · This anomaly is regarded as a benign condition since there is completely normal blood flow after the distal segment of the abnormal coronary artery. In this case report, we present a 48-year-old male patient with a woven coronary artery anomaly in the circumflex artery and who had been followed up for 5 years.

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC6748902>

Woven coronary artery (WCA) is a rare and underdiagnosed anomaly characterized by **epicardial coronary artery** dividing into multiple twisted single channels then anastomosing at distal segment. The **malformation** is usually believed as a benign condition without traces of thrombosis or dissection flaps, and merely diagnosed incidentally.
