Peer-review report(s):

Reviewer #1:

Scientific Quality: Grade B (Very good)

Language Quality: Grade B (Minor language polishing)

Conclusion: Minor revision

Specific Comments to Authors: The results of the article are extremely beneficial for the prevention of pandemic these days. Also, the writing language of the article is very successful. This is a timely and well organized review paper. Literature review and inclusion is quite comprehensive in the related topic. And it's also a guide for future work. This article should be published and shared data as soon as possible. Hence, it can be helped to control the pandemic. BEST REGARDS

Response: Thanks for your comment and your positive feed back for our manuscript. We have made some modification in the conclusion and checked the manuscript again for to correct any typos we have found, we have highlighted them in red.

Reviewer #2:

Scientific Quality: Grade C (Good)

Language Quality: Grade B (Minor language polishing)

Conclusion: Minor revision

Specific Comments to Authors: General comments: The manuscript-review entitled "Holistic care model of time-sharing management for severe and critical COVID-19 patients" describes a holistic care model on time-sharing management for severe and critical cases from the authors daily work experiences. At present, epidemic prevention and control in China has been on the verge of victory, while some other countries are experiencing the dark moments that they have experienced once. This article provides important evidence for non-ICU nurses to adapt care management mode of ICU and ensure the quality and efficiency of care during the epidemic. I enjoyed the paper, and found it quite informative. It will have a good impact as it is very timely. Of course the literature will also be rapidly changing in this field as more about COVID 19 is understood. Something to consider that may enhance the paper is a summary table of the key points. This will immediately catch a readers attention.

Response: Thanks for your comment . We have made some modification in the conclusion and checked the manuscript again for to correct any typos we have found. We also added a summary of highlights of our research in the revised manuscript, which is also the requirement of the editorial office. All changes are highlighted them in red.

Reviewer #3:

Scientific Quality: Grade B (Very good)

Language Quality: Grade B (Minor language polishing)

Conclusion: Accept (General priority)

Specific Comments to Authors: In this manuscript, the authors aimed to improving the quality and efficiency of care, thus reducing the mortality rate of COVID-19 patients in ICU. In general, this is a well-written manuscript on an actual topic for establish the quality and efficiency of care for the 2019 novel coronavirus pneumonia in critical care nurses. Therefore, it deserves to accept for publication.

Response: *Thanks for your comment and your positive feed back for our manuscript. The language was examined closely to avoid any language mistakes. All changes are highlighted them in red.*
