SPECIFIC COMMENTS TO AUTHORS

The authors reported a case of fecal impaction in a large colonic diverticulum. Though the manuscript is well-written, it's not educational enough for the readers of this journal, I think.

SPECIFIC COMMENTS TO AUTHORS

authors reported the case of a 62-year-old woman who suffered from abdominal pain and vomiting, who had medical histories of repeated acute abdomen, and in whom fecal impaction in the descending colon was diagnosed based by X-ray and CT imaging. After examination by gastrografin-enhanced colonography following colonoscopy and CT colonography, the fecalith was suspected to have been produced at a large diverticulum in the transverse colon. Surgically resected and a histological diagnosis of pseudo-diverticulum was made with no recurrence during 33 months of follow-up. This case highlights the importance of accurate identification and treatment of a fecal impaction. The endoscopic evacuation and subsequent colonography was effective for identifying a diverticulum that might have caused fecal impaction, suggested that appropriate emergency medical treatment and maintenance treatments could be selected to prevent recurrence.
