**Intravitreal Dexamethasone Implant- a new treatment for idiopathic posterior
scleritis: A case report**

IntravitrealDexamethasone Implant for idiopathic posterior scleritis

Abstract

BACKGROUND

Posterior scleritis is one of the most easily missed and misdiagnosed diseases in ophthalmology. In this case we observed the effects by treating the patient with intravitreal dexamethasone implant which has not been extensively studied before.

CASE SUMMARY

A 40-year-old female patient who has anxiety, palpitation and insomnia presented with

Intravitreal Dexamethasone Implant- a new treatment for idiopathic
