**Effects of different acupuncture methods combined with routine rehabilitation on gait of stroke patients**

acupuncture methods on gait of stroke patients

**Abstract**

**BACKGROUND**

Stroke refers to a group of cerebrovascular diseases associated with organic brain injury. It is characterized by the sudden and rapid onset of focal or diffuse dysfunction. In recent years, in addition to routine treatment, Chinese medicine acupuncture has been administered to patients with hemiplegia, and it can be considered a new treatment for rehabilitation.

**AIM**

To investigate the effects of eye acupuncture needle retention and body acupuncture combined with routine rehabilitation on gait performance and plantar pressure in patients recovering from stroke.

## Acupuncture for Stroke Recovery and Rehabilitation

<https://www.verywellhealth.com/can-acupuncture...>

A research review published in the Cochrane Database of Systematic Reviews in 2016 sized up 31 studies (with a total of 2257 participants) on acupuncture for stroke rehabilitation. According to the study's authors, acupuncture may have effects on improving dependency, global neurological deficiency, and some specific neurological impairments for people with stroke.
