SPECIFIC COMMENTS TO AUTHORS

1. As this study from 2010-15, the newer prognostic factors like tumor budding and molecular changes are not included in prognostification. 2. Till 2020 would have given a better prognostic details. 3. In reference 1 , year of publication is not mentioned 4. Recent articles on recent prognostic indicators of colorectal carcinoma can be discussed in discussion.

SPECIFIC COMMENTS TO AUTHORS

The article is written on a relevant topic. Colorectal cancer is a significant public health problem worldwide. The methodological level of work is high and beyond doubt. The research results, important for practical doctors, were obtained. The results showed that LNR is more important for the prognosis of middle-aged and elderly patients with stage 3 adenocarcinoma than pLN and DLNs. As a result, nomograms have been created that will be useful for patient management. There are no significant disadvantages on the article. It can be published in the World Journal of Gastroenterology if the journal actively publishes articles related to the management of cancer patients by practitioners.

SPECIFIC COMMENTS TO AUTHORS

I would like to thank the authors for the well written manuscript. However, I have very little concern , the introduction is over shortened and need a little bit more details to move the reader smoothly to the manuscript. It would be difficult for general endoscopists or gastroenterologists to easily move across the manuscript. I would suggest highlighting recent studies as the following <https://doi.org/10.3389/fonc.2020.00733> specially one that included large number of patients as this one <https://doi.org/10.1007/s00384-020-03562-6> . Otherwise, I found the manuscript very interesting and informative.
