#### **SPECIFIC COMMENTS TO AUTHORS**

The manuscript "Mesenchymal stem cell-derived small extracellular vesicles in the treatment of human diseases:progress and prospect" by ShiJet al. emphasize the use of small extracellular vesicles as a cell-free therapy for the treatment of various human diseases. In my opinion, the topic is interesting, the literature is well cited, and paper may be published in the present form. However, a further language revision would be suitable to amend some typos and improve the text. For example: Pag. 6,..At the same time, the microenvironment of original cells also could influence... Pag. 9, ...of Col II (the main component of the cartilage matrix) in the cartilage matrix and.. Pag. 13, ... They study showed... should probably be ....Their study showed.... Abbreviations should be carefully checked throughout the text.
