Recurrent thrombosis of splanchnic and lower extremity ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC6767714>

One month after surgery to the lower extremities, the patient visited the emergency room with a new complaint of abdominal pain. **Abdominopelvic CT** revealed thrombosis of SMA branches, **jejunal necrosis**, and **floating thrombus** of the abdominal aorta (Figure 3). Jejunal resection of 1 m and double barrel jejunostomy were performed again.

Recurrent Thrombosis of Splanchnic and Lower Extremity ...

<https://pubmed.ncbi.nlm.nih.gov/31632677>

Many essential thrombocythemia patients exhibit various symptoms, including microvascular thrombosis with **acute coronary disease**, **digital ischemia**, and **transient ischemic attack**. This study reports a rare case of recurrent thrombosis in relatively large vessels including splanchnic, lower extremity arteries, and aorta in essential thrombocythemia.

Recurrent thrombosis of splanchnic and lower extremity ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC6767714>

Here, we reported a rare case of recurrent thrombosis in relatively large vessels, including **splanchnic**, **lower extremity arteries**, and **aorta with ET**. **ET patients aged** >60 years and who have risk factors such as history of major ischemic events or severe leukocytosis must be careful of thrombosis of the medium- and large-sized arteries, including splanchnic and lower extremity arteries.

While **polycythemia vera** is a myeloproliferative disorder characterized by increased red blood cell mass, venous and arterial thrombosis is a common complication. The mechanism underlying the increased incidence of thrombotic events remains illusive. In this report we present the case of a 77-year-old man
