 We report a case of a 1-year-old female infant with hydronephrosis prenatally detected by ultrasound. After close postnatal follow-up and diagnosis, she eventually underwent a definitive reconstructive procedure. This is the first reported case of a bilateral ureteropelvic junction obstruction of the upper moieties of a duplex collecting system.

 Most VVF are the result of pelvic surgeries,where in 90% occur post hysterectomy. Our objective is to describe the surgical technique and outcomes with robot-assisted laparoscopic repair of VVF in 24 patients. Materials and Methods: From 2013 to 2018, a total of 24 patients with VVF underwent robot-assisted laparoscopic VVF repair.

 Curious case of traumatic penile inversion – a case report. N. Jogappanavar. Introduction and Objectives: Traumatic injuries to the external genitalia are common especially in road traffic accidents. Loss of skin segments, penile fracture or testicular trauma, and even amputations are examples of external genitalia trauma.

Robot-assisted laparoscopic pyeloureterostomy for ureteropelvic junction rupture sustained in a traffic accident: First case report in Korea

Minimal invasive technique in ureteral injuries

Abstract

BACKGROUND

Ureteral reconstruction is a highly technical type of laparoscopic or open surgery. The incidence of ureteral injury is low; however, ureteral injuries tend to be overtreated. Robotic surgery for urinary reconstructive surgery is growing in popularity, which has made procedures such as pyeloplasty, ureteroureterostomy, and ureteroneocystostomy possible, with minimal damage to the patient. To the best of our knowledge, this is the first report of robot-assisted laparoscopic pyeloureterostomy in Korea in a 17-year-old

Laparoscopic appendiceal interposition pyeloplasty for ...

<https://www.sciencedirect.com/science/article/pii/S1477513118303607>

Dec 01, 2018 · Three patients were male and one was female, with a median age of 24 months (range 6–204). Two cases were right-sided strictures, and two left-sided. The cause of the stricture included previously failed pyeloplasty (two cases), **traffic accident** (one **case**), and iatrogenic ureteroscopic lithotripsy injury (one **case**).

Apr 19, 2017 · To our knowledge, we are the first to **report a case** series on the feasibility of robotic VVF repair in Singapore. Methods: A total of 5 patients underwent **robot-assisted laparoscopic** VVF repair between July 2011 and September 2016. These were reviewed retrospectively. 4 of the cases were done within the last 5 months.
