SPECIFIC COMMENTS TO AUTHORS

The authors present a case report of Hemosuccus pancreaticus caused by gastroduodenal artery pseudoaneurysm associated with chronic pancreatitis. Despite they say it is a rare condition, the same authors stated that more than 150 case are already described in literature. The article is poorly written, with many mistakes and informal language. Figures are good quality, despite they should add more figure about embolization technique. Too many references are included.

SPECIFIC COMMENTS TO AUTHORS

the authors present a classic presentation of a rare disorder of arterial pseudoaneurysm in the setting of chronic pancreatitis, with obscure overt bleeding. the article is well written and the images are excellent. It highlight I have few suggestions: 1-I think the authors should highlight the importance of complementary tests (e.g. CT scan), in the diagnosis of obscure overt upper gi bleeding.If the other hospitals had performed a ct scan, they would have discovered the chronic pancreatitis and pseudoaneurysm and treated this patient much earlier. 2- also the authors should highlight the importance of examining the second portion of the duodenum with a side viewing scope, espeically if the endoscopist finds blood in the duodenum, but no obvious lesion. A side viewing duodenoscopy (ERCP scope) would evaluate the ampulla for any active bleeding, and the periampullary area for dieulafoy lesions. we occasionally can see blood coming out of the ampulla and diagnose hemobilia/bleeding from the ampulla during the EGD.

SPECIFIC COMMENTS TO AUTHORS

This is an excellent report on a very rare condition with a clear description of the patient's course, review of literature and pertinent diagnostic and therapeutic methods.

The illustrations are relevant and informative.

SPECIFIC COMMENTS TO AUTHORS

Authors showed a case of HP caused by gastroduodenal artery pseudoaneurysm secondary to chronic pancreatitis, which was successfully treated with endovascular embolization for hemostasis. Manuscript is well written. Authors could have made a table of salient clinical features of 150 reported cases of HP.

thank you for the edits: very nice manuscript and informative figures and videos, and summary. minor points: 1-please reference figure1 and video 1-a in the text. currently only figure 2 and video 1-b are referred to in the text. 2-also introduce table 2 more clearly, for example you could say "Table 2 summarizes the salient clinical features of 118 cases of HP published in the English literature ".
