## Answering Reviewers

1. Please include literature review of Multi-Route tigecycline administration in other CNS infections.

A: We have included literature review of Multi-Route tigecycline administration in other CNS infections in discussion. Tigecycline is also used to treat other central nervous system infections. Wu YX et al and Soto-Hernandez JL et al reported a case of intracranial infection of multidrug-resistant *Klebsiella* treated with tigecycline. And Sahin A et al reported a child with enterococcal ventriculitis treated with tigecycline. These cases demonstrate the efficacy and safety of multi-route tigecycline in the treatment of central nervous system infections.

2. Minor language editing is required.

A: We have reduced the number of language errors.
