SPECIFIC COMMENTS TO AUTHORS

CY1P0 is a special type of distant gastric cancer metastasis, which describes a patient with positive peritoneal lavage cytology, but no definitive peritoneal metastasis. Currently, there are no widely accepted treatment guidelines for CY1P0 gastric cancer patients. In this brief study, the authors evaluated the effect of radical gastrectomy on the survival of CY1P0 gastric cancer patients and to identify risk factors associated with prognosis. The manuscript is well designed. The methods are very clear and results are interesting. The manuscript requires a minor editing, include the references and table. Some minor language polishing also should be corrected.

SPECIFIC COMMENTS TO AUTHORS

This study evaluated the effect of radical gastrectomy on the survival of CY1P0 gastric cancer patients and to identify risk factors associated with prognosis. The results are very interesting. The data in tables are good. The figures require editing, words in figure 4 and figure 5 seems moved by mistake. The references are updated, and well discussed. No other specific comments.

SPECIFIC COMMENTS TO AUTHORS

In this retrospective study, Kang et al assessed the survival of CY1P0 gastric cancer patients post-radical gastrectomy, and to identify factors associated with long-term prognosis. Total 48 patients with primary CY1P0 gastric cancer who had radical gastrectomy were included, and the overall survivals were analysed. The results are reasonable, and well discussed. The recommend to accept it after a minor editing.
