Acute pancreatitis with pulmonary embolism: A case report

Xue-Ling Fu, Fa-Ke Liu, Ming-Dong Li, Chang-Xue Wu

Abstract

BACKGROUND

Acute pancreatitis (AP) is a common critical disease of the digestive system, which is often associated with multiple complications. Vascular complications are relatively rare and are one of the causes of death. AP complicated with pulmonary embolism (PE) is even rarer, and there are no reports of AP complicated with PE in elderly patients.

Pulmonary embolism refers to obstruction of the **pulmonary artery** or one of its branches. by material (usually a **thrombus**) that originated elsewhere in the body. Extensive lower **limb deep vein thrombosis**. with **pulmonary embolism** is a rare complication of **acute pancreatitis** that has been described in a few **case. reports**.

Acute Pancreatitis

Medical condition

Acute pancreatitis is a serious condition where the pancreas becomes inflamed over a short period of time. The pancreas is a small organ located behind the stomach and below the ribcage.

[NHS](#)

Symptoms

The main symptom of acute pancreatitis is a severe, dull pain around the top of your stomach that develops suddenly.

This aching pain often gets steadily worse and can travel along your back or below your left shoulder blade. Eating or drinking...

[Read more on NHS](#)

Causes

Most cases of acute pancreatitis are closely linked to gallstones or to alcohol consumption, although the exact cause isn't always clear.

Gallstones

Gallstones are hard pieces of stone-like material that form in your gallbladder. They can trigger...

[Read more on NHS](#)

Treatments

Acute pancreatitis is treated in hospital, where you'll be closely monitored for signs of serious problems and given supportive treatment, such as fluids and oxygen.

Many people are well enough to leave hospital after 5-10 days.
