

Dear Editors,

Thanks a lot for having reviewed our manuscript. All comments from editors and two reviewers have contributed a lot to improve the quality of our article. Now we have reviewed the manuscript according editor's and reviewers' comments. The amendments are highlighted in yellow in the revised manuscripts. We also responded point by point to the issues raised.

### **1.About the language quality:**

The two reviewers both considered the article need minor language polishing and the editor asked us to have a native-English speaker edit the manuscript. Although our manuscript had already polished by English professional before submission and the language editing certificate had been provided, we still found a native-English speaker to polish the manuscript further, so that its language will meet the publishing needs. A new language editing certificate will be uploaded this time.

### **2.About the 5 Issues raised by editor:**

**(1) I found the title was more than 18 words. The title should be no more than 18 words (no acronyms should be included in the title).**

We've already shortened the title as required:

New Indictors in Evaluation of Hemolysis, Elevated Liver Enzymes, and Low Platelet Syndrome: A Case-control Study

Running title: New Indictors in Evaluation of HELLP

**(2) I found the authors did not provide the approved grant application form(s). Please upload the approved grant application form(s) or funding agency copy of any approval document(s).**

We have uploaded the funding agency copy of approval documents this time, three documents in all.

**(3) I found the authors did not write the “article highlight” section. Please write the “article highlights” section at the end of the main text.**

“Article highlights” section has been written at the end of the main text in the manuscript.

**(4) please don't include any \*, #, †, §, ‡, ¥, @....in your manuscript; Please use superscript numbers for illustration; and for statistical significance, please use superscript letters. Statistical significance is expressed as aP <0.05, bP <0.01 (P > 0.05 usually does not need to be denoted). If there are other series of P values, cP <0.05 and dP <0.01 are used, and a third series of P values is expressed as eP <0.05 and fP <0.01.**

We've already deleted \* in the manuscript and use superscript numbers for illustration instead. Statistical significance is expressed as aP <0.05, bP <0.01 in the places where are needed.

**(5) please provide an audio core tip file where the core tip content is recorded**

An audio tip file have been uploaded this time.

**(6) Please provide the signed Conflict-of-Interest Disclosure Form and Copyright License Agreement.**

The signed Conflict-of-Interest Disclosure Form and Copyright License Agreement have been uploaded this time.

We hope that the revised manuscript can be acceptable for publication.

Thank you.

With best wishes,

Yours sincerely,

Li-ping Zhou.
