Recurrent Takotsubo cardiomyopathy triggered by emotionally stressful events: A case report

Hao-Yu Wu, Gong Cheng, Lei Liang, Yi-Wei Cao

Abstract

BACKGROUND

Takotsubo cardiomyopathy (TCM) is characterized by reversible left ventricular dysfunction triggered by emotional or physical stress. Only 1%-2% of patients with acute coronary syndrome are diagnosed with TCM. Although obstructive coronary artery disease is frequently considered to be the cause of chest pain, TCM should be

2020-11-3 · **Takotsubo cardiomyopathy** (TC) is acute stress-induced **cardiomyopathy** with characteristic transient wall motion abnormalities. TC has a clinical presentation similar to an acute coronary syndrome, including chest pain or dyspnoea, ECG changes and elevated cardiac enzymes. TC often occurs after emotional stress. There are approximately 50 TC cases reported related to seizure activity, and our ...

2020-6-1 · **Takotsubo cardiomyopathy** (TCM) is a reversible **cardiomyopathy** frequently precipitated by acute emotional or physical stressors through excessive catecholamine release . Both alcohol withdrawal (and subsequent development of delirium tremens) and liver failure are associated with a hyperadrenergic state predisposing to cardiovascular complications.

<https://www.journalmc.org/index.php/JMC/article/view/3011/2342> ▾

Mar 03, 2018 · **Takotsubo cardiomyopathy** is a relatively uncommon **condition triggered by severe physical and/or emotional stress**. It is characterized by transient ventricular wall dysfunction in the absence of coronary artery disease (CAD). Herein, we **report a case** of a 59-year-old female who had three **episodes of recurrent Takotsubo cardiomyopathy**.

Oct 24, 2019 · Introduction. **Takotsubo cardiomyopathy** mimics acute myocardial infarction in its presentation and has a recognized recurrence rate. 1, 2 So far, the literature focused on the re-occurrence of the syndrome in populations without particular attention to the number of recurrences in a certain individual. We, hereby, present a **case** of a patient having three confirmed recorded recurrences at the ...

Takotsubo Cardiomyopathy

Medical Condition

A type of non-ischemic cardiomyopathy in which there is a sudden temporary enlargement of the heart muscles.

Rare (Fewer than 200,000 cases per year in US)

Requires lab test or imaging

Treatment from medical professional advised

Can last several weeks or months

Occurs following extreme emotional stress. Symptom is sudden chest pain. Treatment is medications.

Symptoms

- Sudden onset of chest pain
- Shortness of breath
- Palpitations
- Nausea/vomiting

Treatments

Treatment is dependent on the symptoms. The patient is monitored for a minimum of 24 hours.

Medication

- ACE inhibitors: Used to reduce blood pressure.
[Enalapril](#)
- Beta blockers: Used to manage abnormal heart rhythm.
[Propranolol](#)
- Anticoagulants: May be given for a short period of time to prevent stroke.
[Warfarin](#)
