Manuscript Type: CASE REPORT

Subtalar joint pigmented villonodular synovitis misdiagnosed at the first visit: A case report

Misdiagnosed subtalar joint PVNS: A case report.

Abstract

BACKGROUND

Pigmented villonodular synovitis (PVNS) is an uncommon disease that usually occurs in large joints, and involvement of the subtalar joint is rare. The lack of comprehensive knowledge of subtalar joint PVNS could lead to misdiagnosis.

CASE SUMMARY

We present a 64-year-old woman who, at her first visit, complained of discomfort in the

A subtalar joint pigmented villonodular synovitis was misdiagnosed
