Systemic Lupus Erythematosus and Antineutrophil Cytoplasmic Antibody-Associated Vasculitis Overlap Syndrome in a Seventy-Seven-Year-Old Male: a Case Report

Systemic Lupus Erythematosus and Antineutrophil Cytoplasmic Antibody-Associated Vasculitis Overlap Syndrome in a Seventy-Seven-Year-Old Male: a Case Report

Abstract

BACKGROUND

+ADw-html+AD4APA-p+AD4-Systemic lupus erythematosus (SLE) and antineutrophil cytoplasmic antibody (ANCA)-associated vasculitis (AAV) are classically thought to cause renal impairment and small vessel vasculitis with different pathophysiologies. Their overlap constitutes a rare rheumatologic disease. To date, only dozens of cases

Antineutrophil cytoplasmic antibodies (ANCA) are autoantibodies that target proteins in neutrophils and monocytes. They are found in various autoimmune diseases, including systemic lupus erythematosus (SLE) and antineutrophil cytoplasmic antibody-associated vasculitis (AAV).
