SPECIFIC COMMENTS TO AUTHORS

1. In your meta-analysis, antithrombotic therapy was significantly associated with postoperative bleeding after ER. However, there was no significant difference in the postoperative bleeding among ESD, EMR and polypectomy including types of Antithrombotic agents. One cause is that it is possible that the number of cases of ESD, EMR and polypectomy is insufficient. The message in conclusion in your meta-analysis is very weak. 2. It should be divided into esophageal & gastric cases (upper gastrointestinal tract) and colon cases (lower gastrointestinal tract) because the anatomical background is quite different. Regarding polypectomy technique, it should be divided into cold polypectomy and hot polypectomy, too. 3. In terms of Table1 of characteristics of included studies and participants, number of cases, type of antithrombotic agents should be included. 4. In section of "The quality assessment and Publication bias" in Page9, the basis of "9 stars" are difficult to understand. Please show the evidence of it.
