SPECIFIC COMMENTS TO AUTHORS

I think this is a fascinating report that is worthy of publication. I suggest that an English-expert review the manuscript to help improve the English slightly. It is generally very good, however. The reference on page 7 to family is unnecessary. All relevant treatment parameters should be identified on page 7. the authors should also discuss the physiological rationale why a wavelength of specifically 632.8 nm may be useful. Also it is unclear how the light is administered. Is it all through a peripheral vein. If so, what percentage of the blood is expected to be exposed to light during a single treatment session.
