SPECIFIC COMMENTS TO AUTHORS

Akbulut et al. reported two cases who developed ectopic liver tissue on the gallbladder wall. It is interesting if the histological architecture is investigated in detail. Tissue architecture should present with CD34, CK19, and CK18, including AFP. It is also difficult to detect before surgical intervention, radiological findings would help a physician prepare the next case. The character of the vascularity, MRI findings, and contrast ultrasound should present. The incidence of malignancy should be summarized in the table. It believed that no bile congestion in the ectopic liver was a low risk of developing malignancy. Therefore, I cannot entirely agree with your conclusion. Please prove malignancy in your case and provide each malignant case in your 91 patients. Minor point: 8P: However, ectopic livers on rare occasions have been reported to cause recurrent abdominal pain due to torsion, hemorrhagic necrosis, compression of adjacent organs, intra peritoneal bleeding as well as obstruction of the esophagus, portal vein, and neonatal gastric outlet. Each symptom needs reference and frequency.

SPECIFIC COMMENTS TO AUTHORS

This review is a comprehensive summary of previous relevant papers for the ectopic liver tissue, and the analysis is relatively appropriate.

SPECIFIC COMMENTS TO AUTHORS

This is a case report of 2 cases of ectopic liver on the gallbladder incidentally discovered during liver transplant. In addition the authors have done a review of the literature to look at a summary analysis of 91 cases of ectopic liver reported. The discussion is adequate and the figures and tables appropriate. Needs major language editing and also grammatical and typographical corrections.
