SPECIFIC COMMENTS TO AUTHORS

Lu and colleagues report two siblings with steroid-resistant nephrotic syndrome where they identified two novel compound heterozygous mutations in CRB2. The sentence “In the research of primary NS, more attention is paid to detecting the genes” is misleading. The aim is to detect underlying mutations; genes will be present anyway. “So far, more than 20 different single gene mutations such as NPHS1, NPHS2 and PLCE1 have been reported to cause SRNS”. WT1 mutations should be mentioned (PMID: 18516627 and Refs. therein). In the discussion, some sentences regarding the potential function of CRB2 in kidney podocytes should be included.

SPECIFIC COMMENTS TO AUTHORS

The study is merit, but I have minor concerns 1- Minor English polishing is required. 2- More information about CRB2 should be included in the introduction section. 3- More references are required.
