SPECIFIC COMMENTS TO AUTHORS

Very interesting study of formulate and implement a hospital discharge plan based on the needs of parents of children with type 1 diabetes mellitus (T1DM) and to explore the impact on discharge readiness, discharge education quality and blood glucose control. The results are interesting, and well discussed. After a minor editing, it can be accepted for publication. Overall, this manuscript is very well written. I have no other specific comments.

SPECIFIC COMMENTS TO AUTHORS

This is an interesting manuscript focusing on A hospital discharge plan for children with type 1 diabetes can help children and their families realize the transition from hospital care to self-management at home and improve the preparation of children's parents for discharge, thereby improving children's blood glucose control levels. The article is well written, and the idea of the study is novel. The text is strictly logical. I have no further comments. It can be considered for publication.

SPECIFIC COMMENTS TO AUTHORS

This study is an experimental study. It adopts a prospective clinical experimental design and divides the research subjects into an intervention group and a control group in the order of admission time. The current research collected a small sample size due to limited conditions and will gradually increase the sample size as the research progresses. The follow-up time for children with T1DM was still short, and the long-term effects need to be further observed and studied. This is still an interesting and instructive study which was very good presented. So, it deserves publication. However, there should be more latest references for the study.
