Thoracic pyogenic infectious spondylitis presented as pneumothorax: A case report

Thoracic pyogenic infectious spondylitis

Mi-Kyung Cho, Byeong-Ju Lee, Jae-Hyeok Chang, Young-Mo Kim

Abstract

BACKGROUND

Pyogenic infectious spondylitis (PIS) is a rare condition, with an incidence between 0.2 and 2 cases per 100000 per annum. Its most common symptom—back or neck pain—occurs in more than 90% of cases. Herein, we reported a case of thoracic PIS accompanied by pneumothorax in a 65-year-old male patient.

Thoracic Infectious Spondylitis After Surgical Treatments ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3825952>

According to a previous **case report**, the **pyogenic spondylitis** occurred at the non-operated level was approximately seven years postoperatively. At the sites of infection, Harrington hooks and screws were inserted . We recently experienced a **case of infectious spondylitis** that occurred distantly from the operated vertebrae.
