Simultaneous bilateral acromial base fractures after staged reverse total shoulder arthroplasty: A case report

Du-Han Kim, Beom-Soo Kim, Chul-Hyun Cho

Abstract

BACKGROUND

Acromial and scapular spine fractures after reverse total shoulder arthroplasty (RTSA) are a well-known complication that may negatively impact the effects of long-term outcomes. However, to the best of our knowledge, there has been no report of simultaneous bilateral fractures of the acromion or scapular spine that occurred

PDF | A man in his mid-80s presented with **bilateral** posterior fracture dislocations of the humerus after suffering a seizure. He had Parkinson's... | Find, read and cite all the research you ...

Bilateral scapular fractures after reverse shoulder ...

<https://www.researchgate.net/publication/269338657...>

Acromial and scapular spine fractures after reverse total shoulder arthroplasty occur predominantly as a result of bony insufficiency secondary to patient and intra-operative technical factors ...

The Relationship of Bilateral Shoulder Arthroplasty Timing ...

<https://www.sciencedirect.com/science/article/pii/S1058274620305267>

Jul 02, 2020 · Methods. All patients from two insurance databases who underwent **staged bilateral shoulder arthroplasty** between 2005 and 2016 were identified. These patients were then stratified by elapsed time between surgeries into four study groups: (1) less than three months, (2) 3-6 months, (3) 6-9 months, and (4) 9-12 months.
