SPECIFIC COMMENTS TO AUTHORS

1. What is the difference between the treatment of intracortical chondroma and osteoid osteoma? Please make a supplement. 2. What is the guiding significance of the imaging diagnosis of this tumor for clinical treatment? Please make a supplement. 3. The article can use tables and other forms to present the clinical differential diagnosis of intracortical enchondroma and osteoid osteoma in more detail, which not only makes the article's coherent conclusions clearer, but also further improves the clinical significance of the article. If just making a text narrative like this article, the conclusion may not be sufficiently prominent. 4. There are many language errors in the article. Wrong spelling of the "painfull" in the part of abstract, the absence of "the" front of "possibility" and the wrong form of "revealed" in the first paragraph of the discussion section is representative, so the language of the article needs to be further modified. 5. The format of references should be united.

SPECIFIC COMMENTS TO AUTHORS

The manuscript described a case of intracortical chondroma of the metacarpal bone which is less common. Firstly, the authors systematically reviewed 11 cases of intracortical chondroma of the metacarpal bone previously reported. And then, they elaborated the characteristics of the case and the process of diagnosis and treatment in detail, especially focused on the MRI features of the tumor, which provided a basis for the diagnosis and differential diagnosis of the disease in the future. In the entire case report, the patient's clinical data was exhaustive and the discussion part was clearly stated with appropriate references, and without inappropriate grammar expression. In summary, I recommend accepting this manuscript.
