<https://www.semanticscholar.org/paper/Foot-drop-as...>

Background: Although rare, the relationship between peroneal nerve palsy and weight loss has been well documented over the last decades. [...] Key Method Results: 9 patients developed foot drop after bariatric surgery. The mean weight loss for these patients was 45 kg. Weight reduction took place during a mean period of 8.6 months.

A Rare Etiology of Bilateral Foot Drop: Weight Loss [EJFM]

ejfm.trakya.edu.tr/archive/show/volume9/number4/205331

The electromyographic study confirmed the bilateral entrapment neuropathy of the peroneal nerves at the fibular necks and these findings could not be attributed to any other factor except the weight loss. After a balanced diet and a physiotherapy programme, he recovered completely. This case highlights an uncommon but a well documented etiology of peroneal neuropathies. Being aware of this ...

Nov 01, 2020 The loss of the fat pad surrounding the fibular head after rapid and excessive weight loss after bariatric surgery can lead to foot drop symptoms due to peroneal nerve entrapment (PNE). Conservative and surgical approaches have been described for the treatment of this condition, but there is some controversy over the effectiveness of the treatment modalities.

<https://acsjournals.onlinelibrary.wiley.com/doi...>

The pathophysiology of peroneal neuropathies has been attributed to focal demyelination with secondary axonal degeneration or to pure axonal loss without demyelination, 9 which most commonly is due to focal compression of the common peroneal nerve. It is likely that patients with systemic malignant disease also have focal compression from secondary factors, such as weight loss and leg ...

Bilateral common peroneal neuropathy due to rapid and marked weight loss after biliary surgery: A case report

Oh MW *et al.* Bilateral peroneal neuropathy after biliary surgery

Min Woo Oh, Min Su Gu, Hyun Ho Kong

Abstract

BACKGROUND

The causes of peroneal neuropathy are various, but are rarely due to weight loss. Bilateral peroneal neuropathy caused by weight loss after surgery has been reported only after bariatric surgery and there were no reports associated with other abdominal surgery. In this report, we describe a case of the bilateral peroneal neuropathy that
