**Ex-vivo liver resection followed by autotransplantation technique in radical resection of gastric cancer liver metastases: A case report**

Hong Wang, Cheng-Cheng Zhang, Yan-Jiao Ou, Lei-Da Zhang

#### Abstract

##### BACKGROUND

Radical resection of gastric cancer liver metastases (GCLM) can increase the 5-year survival rate of GCLM patients. However, patients may lose the theoretical feasibility of surgery due to the critical location of liver metastasis in some cases.

Oct 13, 2015 · Since the first report of this challenging technique in 1988, ex vivo liver resection and autotransplantation in 60 cases have been sporadically reported. The major diseases were colorectal cancer liver metastasis and cholangiocarcinoma, which were deemed to be unresectable by means of
