

Dear Editors,

Thank you very much for the comment! Our manuscript had been edited by a proficient English speaker. The previous peer review gave **Grade A** in terms of language quality to this manuscript, the proof of which is shown below.

Reviewer #1:

**Scientific Quality:** Grade C (Good)

**Language Quality:** Grade A (Priority publishing)

**Conclusion:** Major revision

**Specific Comments to Authors:** Major criticism: -Vancomycin induced seizure was first described by Caglayan et al. in a 10-year-old girl in 1992. (Caglayan, S., Ozdogru, E., Aksit, S., Kansoy, S., & Senturk, H. (1992). Vancomycin-Induced Hypertension with Transient Blindness and Generalized Seizure. *Pediatrics International*, 34(1), 90–91.doi:10.1111/j.1442-200x.1992.tb00932.x ) Minor criticisms: -Case report section is unnecessarily long and should be shortened. -I would like to see information of the staging, especially to rule out brain metastasis. -CSF results (especially cytology and biochemistry), brain imaging results and EEG report are missing in case report section. -Normal ranges of CRP, vancomycin... should be indicated. -The dose and infusion time of vancomycin should be mentioned.

Yours sincerely,

Guangfei Wang
