

Response to Reviewer (Number ID: 02538092)

Our goal in the presented manuscript was to highlight the role of liver injury in the perspective of COVID-19. We aimed to present potential mechanisms leading to the dysfunction of liver as the result of SARS-CoV-2 infection and to emphasize pre-existing chronic liver disorders as potential risk factors of the severe course of COVID-19. We tried to explore already gathered data in the most complex way to make this review reliable, trustworthy and helpful for clinicians in the management of infected patients.
