

Flapless immediate implant placement into fresh molar ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC6795724>

Oct 06, 2019 - This case report describes immediate implant placement in fresh molar extraction socket, together with the use of PRF for bone regeneration and the soft tissue augmentation around the implant. GBR with PRF was performed to ensure sufficient bone tissues as support structure around the implant.

Platelet-rich fibrin application in immediate implant ...

<https://www.jicdro.org/article.asp?issn=2231-0754;...>

The treatment option for this is implant-supported single crown which has the advantage that adjacent teeth do not have to be prepared, as in a fixed prosthesis. This article presents a case of immediate implant placement in relation to 22 and a guided bone regeneration approach with platelet-rich fibrin (PRF) and bone graft.

The aim of this article is to present the clinical application of immediate implant placement with L-PRF and immediate prosthetic loading in anterior esthetic region. A 24-year-old healthy female patient reported with a chief complaint of poor esthetics in the upper front tooth region with retained deciduous teeth. On oral examination, there were retained deciduous teeth (52, 53, and 63) with ...

[Effect of PRF and Allograft Use on Immediate Implants at ...](#)

<https://pubmed.ncbi.nlm.nih.gov/29962426>

Immediate implant placement can be successful, even at infected **sites**. The adjunctive effects of concomitant use of **platelet-rich fibrin** (PRF) and decalcified freeze-dried bone allografts (DFDBA) at periapically infected **sites** remains to be determined, however. The purpose of this prospective study ...

[Bone regeneration around immediate placed implant of ...](#)

<https://journals.lww.com/md-journal/Fulltext/2018/...>

Rationale: There are some challenges concerning **immediate implant placement** in molar region.

Platelet-rich fibrin (PRF), a second generation **platelet** concentrate, is an autologous fibrin matrix and contains platelets, growth factors, and leukocytes. It is used for tissue healing and regeneration in periodontal and oral-maxillofacial surgery.

[Soft tissue regeneration around immediate implant ...](#)

<https://journals.lww.com/md-journal/Fulltext/2020/...>

Rationale: In this report, a combination of platelet-rich fibrin(PRF) **membrane** and **semi-open flap** technique was used to improve **soft tissue regeneration** in **immediate implant placement** in the **molar region**. PRF, an **autologous fibrin matrix**, has been widely used for **soft tissue wound healing** and regeneration.

Immediate implant placement in combination with platelet rich-fibrin into
extraction sites with periapical infection in the esthetic zone: A case report and
review of literature

Jiao Fang, Xi-Rui Xin, Wen Li, Han-Chi Wang, Hui-Xin Lv, Yan-Min Zhou

Abstract

BACKGROUND

In this case, platelet-rich fibrin (PRF) was added to guided tissue regeneration as a biomaterial in proper order for immediate planting in aesthetic area with periapical infection.
