Current status quo on COVID-19 including chest imaging

Rishi Philip Mathew, Merin Jose, Vinayak Jayaram, Paul Joy, Danny George, Maria Joseph, Teena Sreeba, Ajith Toms

Abstract

With each day the number coronavirus disease 2019 (COVID-19) cases continue to rise rapidly and our imaging knowledge of this disease is expeditiously evolving. The role of chest computed tomography (CT) in the screening or diagnosis of COVID-19 remains the subject of much debate. Despite several months having passed since identifying the

May 01, 2020 · The harms of the **status quo include** increased health care costs, such as duplicate testing when records are not transferable. The failure to implement interoperable health care records may also harm patients by trapping their data in balkanized systems, keeping physicians from accessing needed information in an efficient manner.
