Computed tomography imaging features for amyloid dacryolith in the nasolacrimal excretory system: A case report

Che ZG *et al.* CT features for amyloid dacryolith

Zi-Gang Che, Ting Ni, Zhen-Chang Wang, De-Wang Wang

Abstract

BACKGROUND

Nasolacrimal duct obstruction (NLDO) leading to epiphora is a common ophthalmologic complaint, which may derive from amyloidosis in rare cases. There are a few reports about localized amyloidosis, in which involvement and obstruction of the nasolacrimal duct is exceedingly rare.

Dacryoliths: Nonsurgical Fluoroscopically Guided Treatment ...

<https://pubs.rsna.org/doi/full/10.1148/radiology.212.2.r99au22365>

PURPOSE: To evaluate dacryocystoplasty with fluoroscopically guided nonsurgical removal of dacryoliths in the treatment of dacryolithiasis. MATERIALS AND METHODS: Ten patients with severe epiphora due to partial (n = 8) or complete (n = 2) obstruction of the **nasolacrimal duct system** associated with dacryolithiasis underwent fluoroscopically guided removal of dacryoliths during dacryocystoplasty.

<https://www.sciencedirect.com/science/article/pii/S0161642001005966>

Jul 01, 2001 · Even dacryocystogram or **computed tomography** is limited in that although these **imaging** modalities can detect a "mass" within the lacrimal sac, definitive characterization may not be possible. The findings of our study may be clinically helpful in predicting those patients most likely to harbor a **dacryolith**.
