Granulomatosis with polyangiitis presenting as high fever with diffuse alveolar hemorrhage and otitis media: A case report

Li XJ *et al.* Diffuse alveolar hemorrhage and otitis media

Xiao-Jie Li, Liu Yang, Xiao-Feng Yan, Chu-Ting Zhan, Jiang-Hua Liu

Abstract

BACKGROUND

Granulomatosis with polyangiitis is a necrotizing inflammation of small and medium-sized vessels accompanied by formation of granuloma, involvement of primary granulomatous upper and lower respiratory tracts, glomerulonephritis, and vasculitis of small vessels.

Granulomatosis with polyangiitis (GPA), formerly known as Wegener **granulomatosis**, is a form of granulomatous necrotizing vasculitis of small and medium-sized vessels. It can be restricted to the the respiratory tract, or may involve additional organs, primarily the kidneys, and it most commonly occurs in adults around 40 years of age, with slight male predilection.

Wegener's Granulomatosis

Medical Condition

A rare autoimmune multisystem disease which causes inflammation of blood vessels.

- Rare (Fewer than 200,000 cases per year in US)
- Not known to be contagious
- Requires lab test or imaging
- Treatments can help manage condition, no known cure
- Can be lifelong

An auto immune disorder, where body cells attack its own cells. Fever, night sweats, loss of appetite, fatigue, weight loss and system specific symptoms. Treatment involves in suppressing the immune system through medications.

Symptoms

Symptoms usually begin with respiratory infections and vary depending on the blood vessels of the organ affected. The common symptoms are:

Wegener's Granulomatosis

Medical Condition

A rare autoimmune multisystem disease which causes inflammation of blood vessels.

🏠 Rare (Fewer than 200,000 cases per year in US)

🦠 Not known to be contagious

🧪 Requires lab test or imaging

🩹 Treatments can help manage condition, no known cure

🕒 Can be lifelong

An auto immune disorder, where body cells attack its own cells. Fever, night sweats, loss of appetite, fatigue, weight loss and system specific symptoms. Treatment involves in suppressing the immune system through medications.

Symptoms

Symptoms usually begin with respiratory infections and vary depending on the blood vessels of the organ affected. The common symptoms are:

- Fever
- Night sweats
- Loss of appetite
- Fatigue
- Weight loss
- Eye : Uveitis, Conjunctivitis, Episcleritis, Renal artery occlusion
- Ear, nose and throat : Rhinitis, Epitaxis, Otitis media, hearing loss
- Lungs : Cough (with blood), Dyspnea, chest discomfort
- Musculoskeletal : Myalgia, Arthritis, Athralgia
- Kidney : Renal disease, renal failure
- Nervous system : Mononeuritis, sensorimotor polyneuropathy, cranial nerve palsies
- Cutaneous : Ulcerations, palpable purpura, vesicles, digital necrosis

Treatments

Early diagnosis helps complete recovery, but long term medications will be
