## [rare presentation of a paediatric sinonasal inverted papilloma](#)

<https://academic.oup.com/jscr/article/2018/11/rjy321/5222693> ▾

Nov 30, 2018 · Sinonasal inverted papilloma (IP) is a benign tumour with an extremely low incidence in children. We report the case of an 11-year-old Caucasian male presenting with recurrent right-sided epistaxis, nasal obstruction and a mass in the right nasal cavity. An initial diagnosis of a nasopharyngeal angiofibroma was considered; however, on detailed histological examination, the mass was found to be an inverted papilloma.

### Nasal and paranasal tumors - Mayo Clinic - Mayo Clinic

https://www.mayoclinic.org/diseases-conditions/...

Navigation tabs: Diagnosis, Treatment, Clinical Trials, Coping and Support, Pr

Tests and procedures used to diagnose nasal and paranasal tumors include: 1. Using an endoscopic camera to see inside your nasal cavity and sinuses. During a nasal endoscopy, a thin tube with a light and camera on the end is inserted into your nose. The camera sends pictures to a monitor that your doctor uses to look for anything unusual. 2. Collecting a sample of cells for testing (biopsy). If your doctor finds any abnormalities during a nasal endoscopy, special tools can be used to collect tissue samples. The s...
