SPECIFIC COMMENTS TO AUTHORS

Original case report on multiple mixomas combined with valves involvement. Diagnosis and management are reported. A more detailed description of diagnostic pathway and differential diagnosis would have been advisable.

SPECIFIC COMMENTS TO AUTHORS

This case report is of great significance for that this case report is about left ventricular multiple myxoma which is rarely seen in clinical practice. And the reported patient also suffers from rheumatic heart valve disease, as is much more rarely seen. The effect of the operation on the patient is very well, therefore the report will provide a good method for treatment with such disease.
