Sarcomatoid carcinoma of the pancreas: multimodality imaging findings with serial imaging follow-up: A case report and literature review

Multimodality imaging for pancreatic sarcomatoid carcinoma

Abstract

BACKGROUND

Sarcomatoid carcinoma of the pancreas is extremely rare and has an extremely poor prognosis. Although a few cases of sarcomatoid carcinoma of pancreas have been reported, most are focused on a histopathological review. To the best of our knowledge, there are no reports documenting multimodality imaging characteristics and chronological changes with emphasis on radiologic features.
