This case report showed that early-stage low-grade endometrial stromal sarcoma (LGESS) may possibly be managed by repeated fertility-sparing surgery without adjuvant therapy or radical hysterectomy, in young patients who desired pregnancy. The manuscript is very well written and the review of the literature is comprehensive. MINOR POINTS: In conclusion, the authors mentioned that 'adjuvant therapy may not be necessary'; however, this report is the first attempt of fertility-sparing surgical strategy for LGESS patients with multiple deliveries, so it seemed to be too strong to draw this conclusion through this case report. More modest expression may be appropriate.
