#### **SPECIFIC COMMENTS TO AUTHORS**

The authors presented a interesting case with information to management. It is suggested that accelerated hypofractionated radiotherapy could be successfully used to treat primary locally advanced NSCLC with bilateral mediastinal lymph node involvement. It still need case collection to confirm the effects of this therapy.

#### **SPECIFIC COMMENTS TO AUTHORS**

The author describe the case of a patient with locally advanced node-positive NSCLC treated in a phase II prospective protocol with chemotherapy, accelerated hypofractionated radiotherapy (AHRT) and surgery in the pre-immunotherapy era. They show a case accelerated hypofractionated radiotherapy can be used successfully to treat primary locally advanced NSCLC with bilateral mediastinal lymph node involvement. It is uncommon but need to a serie of case to prove. They give a good design studies that contemplate chemotherapy, hypofractionated RT and IO. But, in this study, I did' see the histologically examination. According to above, I recommend transform to a oncologist or pulmonologist who can work togethr to assess if this article should be publish or not.
