Acute urine retention in early pregnancy resulting from ...  
https://www.fertstert.org/article/S0015-0282(07)03772-7/fulltext  
Acute urine retention in pregnancy is an emergency and necessitates a rapid and effective management to drain the bladder. When it is due to the incarceration of fibroids, a stepwise therapeutic strategy is proposed, developed on the basis of our clinical experience and an analysis of published reports.

PEOPLE ALSO ASK

What causes urinary retention during the second trimester?

Urinary Retention

Also known as: ischuria

Inability to voluntarily empty the bladder completely or partially.

Common causes

Urinary retention is not always related to an underlying condition. It may be caused by:

- Medication side effects
- Vaginal childbirth
- Foreign body inserted into urethra

Treatment

**Self-treatment:** Self-care steps that may be helpful in some less-serious cases:

- Fluid and diet modification- Avoid processed food, artificial sweeteners, acidic or spicy food
- Bladder retraining- Includes scheduled bathroom visits and delaying urination
- Kegel exercises - exercises to strengthen the pelvic muscles
- Limit beverages that increase urination, including caffeinated drinks like
