Diagnosis and spontaneous healing of asymptomatic renal allograft extra-renal pseudo-aneurysm: A case report

Xu RF *et al.* Renal allograft extra-renal pseudo-aneurysm

Rui-Fang Xu, En-Hui He, Zhan-Xiong Yi, Li Li, Jun Lin, Lin-Xue Qian

Abstract

BACKGROUND

Transplant renal artery stenosis is a relatively frequent vascular complication after transplantation. However, extra-renal pseudo-aneurysms (EPSAs) are rare after transplantation, which might be life-threatening and usually need open surgical repair. We manifested the diagnosis and spontaneous healing of an asymptomatic renal

[https://www.jvascsurg.org/article/S0741-5214\(13\)01327-X/pdf](https://www.jvascsurg.org/article/S0741-5214(13)01327-X/pdf)

Renal artery pseudoaneurysms after **renal** transplantation are extremely uncommon and are able to cause severe complications such as aneurysm rupture or **renal allograft** loss. Treatment often leads to transplant nephrectomy. We successfully treated a transplant **renal artery** pseudoaneurysm with covered stents, which resulted in well-preserved

Renal artery aneurysm: Surgical indications and results ...

<https://www.sciencedirect.com/science/article/pii/S0950821X05806206>

Sep 01, 1992 · At the time of the **diagnosis**, one of these patients was already suffering from complete **renal** failure. A solitary **kidney** was present in this **case** and additional **renal** artery dissection was the cause of the thrombotic occlusion of the RAA (**case** no. 10, Table 1). The average creatinine values in this population was 3.2 mg d1-1.
