SPECIFIC COMMENTS TO AUTHORS

This study describes the positive significance of the joint adoption of cooperative nursing management and self-efficacy education of the physical and mental state of patients undergoing gastrointestinal tumor surgery. It can improve the physical and mental states of patients with gastrointestinal tumor surgery, change the response to disease, and reduce the risk of postoperative infection. The study is very interesting and the results are informative. This manuscript is very well written. Only a language proof is required. I have no further comments.

SPECIFIC COMMENTS TO AUTHORS

This is a well performed study. In this study, the authors reported the intervention effect of cooperative nursing care management and self-efficacy education on postoperative infection and self-efficacy in patients with gastrointestinal tumor surgery. The application value of the cooperative nursing care system of medical care has also received widespread attention in recent years. Some linguistic corrections regarding both style and grammar need to be performed by a native speaker.
