SPECIFIC COMMENTS TO AUTHORS

Dear Author , Please modify your manuscript or give your comments on following points :- 1. Why did you preferred Retrobulbar block as Peribulbar regional block is always safe and why RBB was again repeated although by an expert surgeon? 2. What were the dimension of needle attached to syringe? 3. What was the axial length of the globe(short/long)? 4. During the RBB procedure did the surgeon sucked the syringe and looked for ocular movements after penetration? 5. Do you have facility to give ultrasonic guided regional blocks ? 6. Please write in longer paragraphs wherever possible. Thanks
