Arthroereisis in juvenile flexible flatfoot: Which device should we implant? A last five years literature systematic review

Arthroereisis devices in flatfoot

#### Abstract

##### BACKGROUND

The flexible flatfoot (FFF) is a very common condition in children, characterized by the loss of the medial arch and by an increase in the support base with valgus of the hindfoot. The arthroereisis (AR) procedures are common corrective surgeries widely performed. The AR are classified in Subtalar AR and calcaneo-stop (CS).

##### AIM

To investigate the last five years literature systematic review
