SPECIFIC COMMENTS TO AUTHORS

Reviewer comments The authors investigated the “Treatment of severe extravasation injuries with localized closure, ethacridine lactate wet dressings, and phototherapy ”

General comment In general, the manuscript needs a major revision in order to be suitable for publication. Overall, the language and grammar in the manuscript are not of a sufficient standard and need further work to improve it. The title of the manuscript is confusing: “Treatment of severe extravasation injuries with localized closure, ethacridine lactate wet dressings, and phototherapy” not reflect the main idea of the manuscript.

Specific comments: Abstract: The abstract is inadequate and doesn’t summarize the work described in the manuscript. Introduction: Many sentences are difficult to understand and using inaccurate words. Methodology Please specify the name of hospital that the study was done. Registration no of ethics approval? ‘ stage III or IV extravasation injuries ’ please explain Any inclusion and exclusion criteria? Results The research objectives achieved by the method used in this study however, proper result presentation and legend are advised. Need more description of the results. Figures 1A and 2A needs to be improved: all these figures need to be replaced by new ones having an adequate quality. Discussion The discussion is not organized; however, the discussion is presented fairly good by the author. Limitation of the study is not mentioned. References Please avoid to use citation more than 10 years old.
