**Asymptomatic portal vein aneurysm: Three case reports**

Priadko K *et al.* Asymptomatic portal vein aneurysm

## Abstract

### BACKGROUND

Portal vein aneurysm (PVA) is an uncommon vascular dilatation, showing no clear trend in sex or age predominance. Due to the low number of published cases and the lack of management guidelines, treatment of this condition remains a clinical challenge.

### CASE SUMMARY

We present three cases of asymptomatic PVA; the first and second involve an extrahepatic manifestation of 48 mm and 42.3 mm diameter respectively, and the third

## Portal vein aneurysm: report of six cases and review of ...

<https://pubmed.ncbi.nlm.nih.gov/9107651>

We report six cases of portal vein aneurysm (five extrahepatic and one intrahepatic). All patients were asymptomatic and had no signs suggestive of portal hypertension; the lesion was incidentally detected by ultrasound. **Color Doppler sonography** showed a constant hepatopetal flow along the aneurysmal wall, which immediately led to the diagnosis. We stress the usefulness of **color Doppler sonography** for ...
