SPECIFIC COMMENTS TO AUTHORS

In my opinion, the paper is well written (minor changes), with very interesting information that helps gastroenterologist to be aware of them for the near future. It has good technical components, but I would suggest: 1- Include objectives, which are just list the various ways we already have for helping us to investigate, diagnosing and sometimes treat our patient, explain how they could be possible applied in the future. 2-Include some information about methods they used to find the papers to be included in their review, period of time, etc.   3- I would suggest to format the tables in a more clear way. The width of the columns can be decreased in the way that the information can fit better in the last one. It is confused in the way it is.   4- They may need to change this phrase: "We also offer several backgrounds to better understand wearable devices". It may give the impression that after reading you will know how to use them.
